**Total:** Represents the total of the scores in the Caseload Grouping

**Note:** The formula for Statewide PEP is the sum of lines 10 and 16 divided by the previous year’s data received from VR. Due to adjustments made to the CS 1257, line 16 statewide total count was reduced by 26. Therefore, the sum of the individual LCSA data for line 16 + line 10 will not equal the statewide total.

* No activity reported by VR or no birthing hospitals for the LCSA or an individual county in a regionalized LCSA, therefore PEP cannot be calculated.

**Note:** The formula for IV-D PEP is line 6 divided by line 5a. Due to adjustments made to the CS 1257, lines 5a and 6 statewide total counts were reduced by 2,731 and 3,436, respectively. Therefore, the sum of the individual LCSA data for lines 5a and 6 will not equal the statewide total.

**Note:** The formula for Percent of Cases and Percent of Cases with Support Orders Established are calculated by taking the individual LCSA data and dividing by the total Cases and Cases with Support Orders Established statewide, respectively. The Support Order to Cases Differential is then calculated by subtracting the Percent of Cases from the Percent of Cases with Support Orders Established.
